

WHY YOU SHOULD CHOOSE AN AISC CERTIFIED STRUCTURAL STEEL FABRICATOR FOR YOUR PROJECT

AISC Certification Programs set the quality standard for the structural steel industry, and they are the most recognized national quality certification program for the industry. The programs focus on the entire structural steel fabrication process.

Companies that wish to earn their AISC certification must go through rigorous initial evaluation, which involves a comprehensive administrative review, documentation audit, and an on-site audit of the firm's quality management system that can take up to 6 months to complete.

A structural steel fabricator's goal is to build quality structures by focusing on seamless interface through all aspects of the fabrication process and integrating quality controls as a matter of course. An AISC certified fabricator can provide streamlined project productivity with the latest structural steel fabrication technology to ensure your projects comply with the associated specifications.

Owners and design professionals set quality standards through specification on their projects and selecting an AISC Certified structural steel fabricator is essential to execute that level of quality.

Surveys of owners and EPCs identified three critical drivers in the selection of a structural steel fabricator:

1. Cost
2. Speed
3. Quality

An AISC Certified structural steel fabricator employed on your project is proven to enhance all three of these critical drivers.

- Reduce your cost and increase your profitability through enhanced consistency from the structural steel fabricator
- Inspection schedules and documentation are identified in an AISC Certified structural steel fabricator's QA/QC Programs, which eliminates the need for third-party inspectors and facilitates expedited deliveries
- Selecting an AISC Certified structural steel fabricator assures that the specified level of quality is met

Southeastern Construction's structural steel fabrication facilities have maintained AISC Certification for decades. We are currently AISC Certified BU: Certified Building Fabricator with the SPE-P2: Sophisticated Paint Endorsement – Covered.

Should your project require competitively priced, high-quality AISC certified structural steel fabrications, request your quote today!
