

ADVANTAGES OF IN-HOUSE ACCESS STEEL FABRICATION

Retaining access steel in-house adds a layer of quality and efficiency to any structural steel project. At Southeastern Construction, we fabricate high-quality access steel on our 24-acre property that holds six AISC Certified facilities. Our certified facilities, each dedicated to a specific structural steel product sets us apart from most structural steel fabricators and allows us to offer low-cost, high-quality products to our customers.

Retaining steel products from in-house facilities provide many advantages [1].

- Access steel is fully integrated into the BIM model from the outset.
- In-house fabrication shops allow for speed and flexibility.
- In-house fabrication shops save time and money spent on transportation costs.
- Steel fabrication in adjoining fabrication shops create a higher level of quality control.
- Associated access steel fabrication properly sequenced in the erection path of the primary structure.
- In-house fabrication shops remove the sub-contractor layer.
