FOR IMMEDIATE RELEASE

SOUTHEASTERN CONSTRUCTION ADDS NEW PRECISION CUTTING SYSTEM FOR STEEL FABRICATION

Mulberry, FL - Southeastern Construction, a leading structural steel plate fabricator since 1972, has announced the installation of a new Multi Process Center 2000 Machining Center Precision Cutting System (MPC2022) at their facility to support structural steel fabrication efforts.

The new machinery will meet steel plate processing needs by producing connection plates, required for structural steel fabrication.

The Messer MPC2000 MC Plate Processor enhances Southeastern Construction's ability to provide their clients fabricated structural steel of the highest quality. This precision cutting system incorporates MD400 Drill, One Telesis® TMP3200 Pinstamp® Marking System, Oxyfuel torch, and Global Rotator Δ (Deltae).

"Southeastern Construction's commitment to offer the best service to our valued customers will be enhanced through the excellent cut part quality and productivity in our new plate processing machine," stated James Green, Business Development Manager of Southeastern Construction and Dixie Southern. "I would like to extend a special thanks to Messer Cutting Systems Inc. for their expertise and guidance."

Southeastern Construction provides high-quality fabricated structural steel products and industrial site construction services to a vast array of customers, including those in the power generation, waste-to-energy, mining, oil, gas, chemical, agriculture, and pulp and paper industries. They fabricate process buildings, pipe racks, access steel, equipment supports, and miscellaneous steel.

The structural steel fabrication facility utilizes the latest BIM, CNC fabrication, and project management technologies, assuring their clients high quality, competitively priced structural steel fabrications. Southeastern's Field Operations group offers highly skilled, safety conscious, experienced craftsmen who exceed onsite construction needs while keeping projects on schedule and within budget.
